Summary

Software engineer with 10 years of experience across many companies and technologies.

Experience

Software Engineer, Company 1 · Jan 2014 – Dec 2015

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 2 · Jan 2015 – Dec 2016

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 3 · Jan 2016 – Dec 2017

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 4 · Jan 2017 – Dec 2018

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.

- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 5 · Jan 2018 – Dec 2019

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 6 · Jan 2019 – Dec 2020

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 7 · Jan 2020 – Dec 2021

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 8 · Jan 2021 – Dec 2022

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.
- Maintained legacy modules and fixed production bugs reported by customers.

Software Engineer, Company 9 · Jan 2022 – Dec 2023

- Developed features for the main product using Java and Spring for internal teams.
- Improved the deployment process with Docker, reducing release time by 20%.
- Collaborated with designers and product managers to deliver new screens every sprint.

- Maintained legacy modules and fixed production bugs reported by customers.

Skills

Java, Spring, PHP, Laravel, JavaScript, React, Angular, PostgreSQL, Oracle, Docker, Kubernetes, AWS

Education

B.Sc. in Computer Engineering, UFRGS, 2014

Languages

English: Upper-intermediate
